

stick

a modular JSGI middleware composition toolkit

stick

a modular JSGI middleware composition toolkit

runs on top of RingoJS

stick

a modular JS/JSON middleware composition toolkit

runs on top of RingoJS

and Node.js through Common Node!

stick

github.com/hns/stick

what is JSGI?

JSGI apps are functions.

```
function(request) {  
  return {  
    status: 200,  
    headers: {"Content-Type": "text/plain"},  
    body: ["hello world!"]  
  };  
}
```

what is JSGI middleware?

JSGI middleware is a JSGI application that wraps another JSGI application.

what is JSGI middleware?

JSGI middleware is a function that wraps a function.

what is JSGI middleware?

JSGI middleware is a function that wraps a function.

`notfound()`

what is JSGI middleware?

JSGI middleware is a function that wraps a function.

`static() ⇔ notfound()`

what is JSGI middleware?

JSGI middleware is a function that wraps a function.

`route() ⇔ static() ⇔ notfound()`

what is JSGI middleware?

JSGI middleware is a function that wraps a function.

`gzip()` \Leftrightarrow `route()` \Leftrightarrow `static()` \Leftrightarrow `notfound()`

what does it look like?

what does it look like?

```
var stick = require("stick");
```

```
exports.app = new stick.Application();
```

what does it look like?

```
var stick = require("stick");
```

```
var app = exports.app = new stick.Application();
```

```
app.configure("gzip", "route", "static", "notfound");
```

what does it look like?

```
var stick = require("stick");
```

```
var app = exports.app = new stick.Application();
```

```
app.configure("gzip", "route", "static", "notfound");
```

```
app.static(module.resolve("public"));
```

what does it look like?

```
var stick = require("stick");
```

```
var app = exports.app = new stick.Application();
```

```
app.configure("gzip", "route", "static", "notfound");
```

```
app.static(module.resolve("public"));
```

```
if (require.main === module)
```

```
    require("ringo/httpserver").main(module.id);
```

what's included?

what's included?

- basicauth - basic HTTP authentication
- continuation - generator-based async requests
- error - generating error pages
- etag - ETag based conditional GET
- gzip - GZip content encoding
- method - HTTP method overriding
- mount - mounting other applications
- notfound - generating 404 pages

what's included?

- params - form data parsing
- profiler - JavaScript profiling
- render - mustache.js templates
- requestlog - collecting per-request log messages
- route - Sinatra-like request routing
- session - session support
- static - serving static files
- upload - handling file uploads

roll your own!

```
function(next, app) {  
  app.myConfig = "foo";  
  
  return function(req) {  
    // do your thing  
    return next(req);  
  }  
}
```

live coding!

thanks!
